Water in these areas may be discolored. Residents are advised to avoid using laundry or hot water facilities during the flushing period. If residents find their water to be discolored, they should run cold water for 5 to 10 minutes until the water clears. Although the water will not be turned off, a drop in pressure in some areas is likely.

Flushing hydrants is a preventive maintenance program to periodically clean out natural residues which deposit in the water lines, as well as to test the hydrants.
